SOFTWARE DEVELOPER

Jared Goldman

Profile

I've spent the last year as acting CTO of a global executive search firm, building the platform its recruiters use every day — and five years before that across regulated crypto, fund infrastructure and public broadcasting. I came to software from a decade as a working drummer and a stint in the naval reserve, which taught me to stay calm in the face of adversity. I build systems that hold up when nobody is watching them, and I don't ship the parts I'd have to apologise for later.

Experience

January 2026 – Present

Gigantes Group — *Chief Technology Officer (Contract)*

Global executive search firm · US, Singapore, Japan, APAC

Built a semantic ranking engine returning up to 500 ranked candidates from one pool of sourced profiles and existing CRM records — the firm stopped paying to rediscover people it owned. Built market-intelligence scoring that alerts the desk four to eight weeks before a role is posted, stopping short of outreach by design. Built a multi-channel sequencer on durable workflows, with a reply sensor that cancels remaining steps the instant someone responds. Built the safety layer: rate limiting, action logs, an error-and-retry queue, and per-provider API cost tracking. Selected the vendor stack and wrote the handover checklist for the team that owns it next.

September 2023 – May 2026

OSF Management — *Software Developer*

Investment fund · Toronto

Built the fund's data ingestion pipeline across the ~15 exchanges we traded on — performance observable in one place instead of reconciled by hand. Normalised inconsistent exchange APIs behind one interface, so the pipeline ran unattended.

January 2023 – September 2023

Canadian Broadcasting Corporation — *Senior Developer*

Built and maintained CBC's authentication layer and newsletter infrastructure, used by millions in Canada and worldwide. Integrated reCAPTCHA v3 into Newsletters, cutting bot traffic that had been degrading the service. Ran security audits across codebases and drove adoption of the fixes.

December 2021 – January 2023

Bitbuy — *Software Developer*

Regulated Canadian crypto exchange

Led a team of 3 to build the CI/CD pipeline and Git workflow, raising release rate by 300%. Built the managed accounts API behind white-labelled services for corporate clients. Optimised the React web application, improving speed and build time by 100%+. Shipped cash withdrawal and secure document upload, including the admin review flow.

Education

Lighthouse Labs, 2021
Full-Stack Web Development
Humber College, 2015
Bachelor of Music

Engineering

TypeScript · Python · Go · SQL
React · SvelteKit · Node.js
PostgreSQL · Supabase · AWS
Docker · CI/CD · Architecture

AI & Data

LLM integration (OpenAI)
Vector search · pgvector
Durable orchestration
Agentic workflows · Evals
